

Why teams use Dropbox Business with Microsoft Office 365

Leading companies who use Microsoft Office 365 recognize the need for the mobile productivity and collaboration capabilities that Dropbox Business delivers. Together, Dropbox and Microsoft have built a best-of-breed partnership to provide an integrated end-to-end solution for users.

✔ Simplify collaboration

- The Dropbox badge enables team members to collaborate on files natively in Word, PowerPoint, and Excel. Collaborators can see who else is viewing their file and update it to the latest version with just one click.
- In-line commenting streamlines approval processes, so you can ship work faster. 120-day deletion recovery and version history means your team has a lengthy file record to reference.
- Co-authoring capabilities bring real-time collaboration to Office files in your Dropbox Business account through Microsoft Office Online. Open your files from Dropbox directly into Office Online, edit alongside your colleagues, and automatically save changes back to Dropbox—all without exchanging an email.

✔ Stay productive anywhere

- Access any of your Dropbox files directly from your desktop. Smart Sync lets you view and open all your files with virtually no local storage space constraints.
- The Office and Dropbox mobile apps include two-way integrations for easy editing and sharing. Users can switch apps seamlessly to stay productive on the go.
- Dropbox Business supports every version of Office since 2007, so users can work however they want.

✔ Get security that scales

- Audit logs include granular file level visibility. Admins can track file-level actions with targeted investigations of user activity.
- Simplify identity management and authentication with Active Directory / Azure sync and ADFS single sign-on integrations.
- Dropbox Business is audited against globally-accepted standards such as SOC 1, 2, and 3; ISO 27001 and 27018; HIPAA/HITECH; and CSA STAR.
